PV-BESS Project Portfolio

328 MW combined · 7 projects · 4 regions

*A diversified, hybridisation-ready solar-plus-storage portfolio
advancing toward ready-to-build status across four Spanish regions*

A diversified PV-BESS opportunity across Spain

Premier Group, through its Spanish development platform, is offering a diversified portfolio of hybrid solar-plus-storage projects located across four regions of Spain.

Since 2006, Premier Group has designed, developed and built solar and wind projects across multiple geographies, with active developments including 6 GW in Spain, 1.5 GW in Italy, 1 GW in Japan, 500 MW in Brazil, and a further 2 GW across the USA, France and the Philippines.

This teaser presents seven utility-scale PV-BESS projects totalling 328.4 MW: 156.5 MW of solar PV and 161.9 MW of battery storage, with one project already hybridised with an additional 10 MW of wind. Land rights and grid connection points are secured at every site.

Under development

Targeting Ready-to-Build status, staged 2026–2028

Spain's storage market is scaling up fast

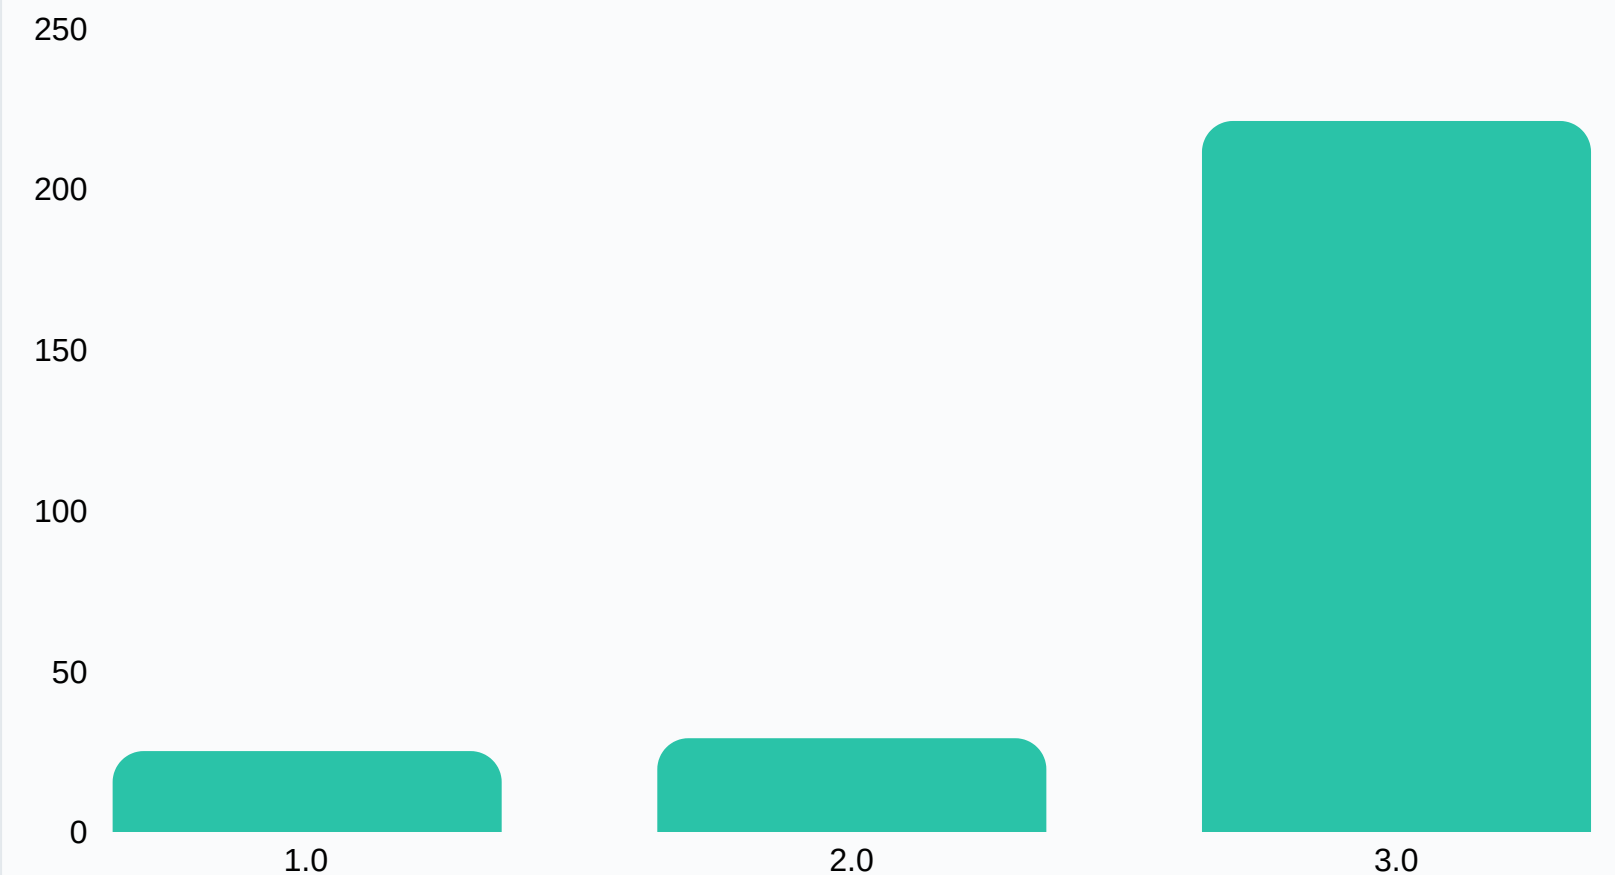

- Large-scale battery storage capacity has grown sharply through 2026, climbing from around 29 MW to 221 MW installed after years of slow permitting progress.
- A further 24,313 MW of storage projects are already authorised or under construction, pointing to a fast-expanding near-term pipeline.
- In May 2026 the European Commission approved Spain's new capacity market, worth up to €9 billion over 2026–2036, remunerating the availability of generation, demand response and storage assets.
- Utility-scale solar PV capacity reached roughly 41 GW by early 2026, keeping Spain among Europe's top two solar markets.

THE OPPORTUNITY

An established renewable energy developer in Spain

Premier Group has been designing, developing and building solar and wind projects since 2006, generating value while executing projects across the renewable energy sector.

Premier has been active in Spain for close to two decades. This 328 MW PV-BESS portfolio is one of the Group's flagship hybrid storage developments in the country, combining seven utility-scale sites across four regions, each with land and grid connection already secured.

PORTFOLIO DISTRIBUTION

The portfolio is spread across four regions of Spain — Andalusia, Castile and León, Madrid and the Valencian Community — balancing scale in Madrid with geographic diversification in the south and east.

- **Andalusia (Sevilla)**
2 projects · 105.3 MW
- **Castile and León (Valladolid)**
1 project · 40.6 MW
- **Madrid**
1 project · 123.6 MW
- **Valencian Community (Alicante)**
2 projects · 58.8 MW

Path to closing

PORTFOLIO CONSIDERATIONS

- Diversified 328 MW pipeline across four regions, reducing single-site permitting and grid risk
- Land and grid connection secured through private agreements at all seven sites
- Secadal (Castile and León) is already hybridised with 10 MW of wind; every other project retains future hybridisation optionality
- Preference to progress toward Ready-to-Build status ahead of any EPC commitments

NEXT STEPS — INVESTOR SUPPORT

- Continued progress on AAC applications across the remaining projects
- DIA and AAP completion for Pinto / Retamar, the largest project in the portfolio
- Introductions and meetings with the Premier Group project team
- Support throughout technical and legal due diligence, including land and grid-connection review
